Information Technology | Individual

The StaffSync - Modern human resource management solution. is a comprehensive web-based application built using the **MERN Stack (MongoDB, Express.js, React.js, and Node.js)** that streamlines and automates various HR processes within an organization. The system provides distinct roles and access levels for **HR personnel, managers, and employees**, ensuring efficient management and transparency across all operations. HR can manage employee data, handle leave approvals, track attendance, and post announcements or news. Employees can apply for leaves, maintain their personal records, mark attendance, and stay updated with company announcements. Managers can oversee leave requests and manage training and development programs for their teams. This centralized platform enhances productivity, improves communication, and promotes a seamless workflow across departments by digitizing core HR functions.

System Requirements | Instructions

To ensure smooth development, deployment, and usage of the **HRM Tool** Web Application, certain system prerequisites must be met. These requirements are categorized into software, setup, and hardware specifications, all of which contribute to building a robust and scalable agricultural platform.

1. Software Requirements

FRONTEND DEVELOPMENT
PROJECT EXECUTION

These are the essential tools and platforms required to develop, test, and run the application efficiently.

- **Operating System**: Windows 10/11, macOS, or Linux — Supports cross-platform development and testing.
- **Node.js (v16 or above)**: Provides the runtime environment for building and managing frontend logic and Powers the server-side logic and handles API routing. Download Node.js
- **npm (v8 or above)**: A package manager required to install dependencies for React and related libraries.
- **React.js**: A JavaScript library for building dynamic and responsive user interfaces.
- **Browser**: Google Chrome / Firefox (latest version) — For rendering and testing the UI in real-time.
- **Express.js**: A lightweight web framework for building RESTful APIs.
- **MongoDB**: A NoSQL database used to store structured and unstructured data related to farms, users, and resources. Download MongoDB
- **Postman**: Tool for testing APIs during development.
- **Visual Studio Code**: Preferred code editor with built-in Git and terminal support.

2. Hardware Requirements

Describes the minimum and recommended specifications needed to support the development and usage of the application.

- **Processor**: Intel Core i5 (8th Gen or above) / AMD Ryzen 5 or better — Ensures fast compilation and multitasking during development.
- **RAM**: Minimum 8 GB (16 GB recommended) — For handling development servers, IDEs, and browser testing simultaneously.
- **Storage**: At least 1 GB free space — Required for package installations, MongoDB setup, and local project files.
- **Display**: 1366x768 or higher — Recommended for optimal coding experience and application layout visualization.
